Approved For Release 1999/09/27 : CIA-RDP88B00553R000100160005-7

Function - The Office of Research and Development is primarily responsible for conducting exploratory research responsive to CIA needs. Particular emphasis is directed toward advanced technologies relevant to long-term intelligence goals. In addition, ORD provides support to other CIA components by performing supporting research but does not pursue development beyond the engineering feasibility testing stage. Summaries of the state of the art in particular technical fields and projections of technological advancements are also made to provide a basis for program planning. The Office is composed of five divisions organized along functional intelligence lines and a Programs Analysis Staff responsible for the planning and programming process.
